

/ 01 COMPANY SNAPSHOT

Fellowship AI LLC is a Texas-based software and artificial-intelligence firm that designs, builds, and operates AI agent systems and automation for organizations in regulated and data-sensitive environments. We deploy autonomous and human-supervised AI workflows inside the customer's own cloud tenancy, so sensitive data never leaves the customer's control, with compliance, auditability, and human oversight built into the architecture rather than bolted on. We deliver custom-engineered systems, not reseller licenses: document and data extraction, cross-system reconciliation, and agentic workflow automation that replaces manual, labor-intensive integration work.

/ 02 CORE COMPETENCIES

AI agents & agentic workflows — autonomous and human-in-the-loop agents that execute multi-step processes, with acceptance gates and fail-closed controls so no irreversible action occurs without human approval.

Document & data extraction — structured capture from unstructured documents, drawings, and records; classification, validation, and routing at volume.

Workflow automation & RPA — orchestration across disconnected systems of record (ERP, CRM, line-of-business apps); event-driven pipelines replacing point-to-point integrations and manual hand-offs.

Compliance-aware automation — data residency, access control, encryption in transit and at rest, and audit logging as a build requirement on every engagement.

Client-owned-cloud deployment — all processing runs in the customer's own AWS, Azure, or GCP environment under the customer's keys; no data duplication to vendor infrastructure.

/ 03 DIFFERENTIATORS

Own-tenancy, data-never-leaves architecture

The compliance posture government and regulated buyers require, by design.

Human oversight + auditability as defaults

Every automated action is traceable and reversible.

Custom-built, integration-agnostic

We engineer to your existing stack, not a forced platform migration.

Small, senior, fast

Direct access to the engineers doing the work; weeks-not-quarters cycles.

/ 04 RELEVANT PAST PERFORMANCE

COMMERCIAL; CLIENT NAMES WITHHELD

- Built a compliance-gated AI operations platform for a professional-services firm, automating timesheet, billing, and document workflows across multiple back-office systems, in the client's own cloud with role-based access and audit logging.
- Delivered an AI document- and data-extraction pipeline for a services business, converting unstructured documents into validated, system-ready data and cutting manual processing time substantially.
- Engineered a collections / operations analytics dashboard with per-source ETL for a financial-services client, consolidating fragmented sources into a single real-time operating picture.
- Standing practice: client-owned infrastructure, acceptance-gated deployment, and compliance review as a build gate before go-live.

Compliance, stated honestly. Fellowship AI is an engineering and services firm, not a cloud service, so FedRAMP and DoD Impact Level authorizations attach to the hosting environment, not to us. In AWS GovCloud (US), the Claude models we deploy via Amazon Bedrock are approved for FedRAMP High and DoD IL4/IL5. We align to NIST SP 800-171 and the NIST CSF by design. We hold no certifications directly; our compliance baseline is inherited through Anthropic and AWS, and we say so. Holding our own, starting with SOC 2 Type II and NIST SP 800-171, is on our roadmap.
